Who are Made-in-India managers? What do they do differently? Over the last fifty years, several Indians have occupied top positions in multinationals across the globe. Shantanu Narayen at Adobe, Satya Nadella at Microsoft, Padmasree Warrior at NIO and Sundar Pichai at Google- there are, today, innumerable instances of CEOs born and bred in India, helming S&P's 500 companies. What accounts for such a prominent presence of Indian professionals across the world today? In *The Made-in-India Manager*, two stalwarts of Indian business and academics examine this little-studied phenomenon and present a compelling argument: that a unique combination of factors has led Indian management thought and practices to become a 'soft power' with the potential to decisively impact global managers of tomorrow. Drawing on their long and varied experience among corporates, the authors explore: • the deep cultural influences that engender a sharp competitive instinct and an astute business perspective; • the circumstances that inspire a high degree of resourcefulness in challenging situations; • the ability to 'think in English and act in Indian', which enables flexible functioning in multicultural work environments; • and, importantly, how today's young managers can build on these advantages and bring to the table their own generational learning, attitudes and capabilities to ensure future success. Thought-provoking and provocative, this fascinating treatise takes a long view of the Indian professional's path to definitive career success, and makes for compulsory reading for every management practitioner. Why ask this question today? After all, a lot is written about India, her culture, her past, her society, the psychology and sociology of individuals and groups. Why is that not enough? It is because what we have learnt so far is either false or fragmentary. If Indian culture is not a slightly inferior, slightly idiosyncratic variant of Western culture, as the received view has it for a very long time, what else is it? Research into culture and cultural differences gives novel and surprising answers. Written for an intelligent but lay public, this book shares the results of 40 years of scientific investigations in the research programme Comparative Science of Cultures. It transcends the political distinction between 'the right' and 'the left' by looking deeper into ideas on human beings, society, culture, experience, the past, impact of colonialism etc. Today, the question 'What does it mean to be

'Indian'?' is both important and difficult to answer. Is there something 'Indian' about this culture that goes beyond the differences between Hindus, Muslims, Christians, Sikhs or Jains? What does it überhaupt mean to belong to Indian culture?

Soil Mechanics and Foundation Engineering, 2e Presents the principles of soil mechanics and foundation engineering in a simplified yet logical manner that assumes no prior knowledge of the subject. It includes all the relevant content required for a sound background in the subject, reinforcing theoretical aspects with comprehensive practical applications.

Therapeutic, Probiotic and Unconventional Foods compiles the most recent, interesting and innovative research on unconventional and therapeutic foods, highlighting their role in improving health and life quality, their implications on safety, and their industrial and economic impact. The book focuses on probiotic foods, addressing the benefits and challenges associated with probiotic and prebiotic use. It then explores the most recently investigated and well-recognized nutraceutical and medicinal foods and the food products and ingredients that have both an impact on human health and a potential therapeutic effect. The third and final section explores unconventional foods and discusses intriguing and debated foods and food sources. While research has been conducted on the beneficial biological effects of probiotics and therapeutic food, the use of these foods remains controversial. To overcome the suspicion of the use of alternative, homeopathic and traditional products as therapy, this book reveals and discusses the most recent and scientifically sound and confirmed aspects of the research. Compiles the most recent, interesting and innovative research on unconventional and therapeutic foods Highlights the role of unconventional and therapeutic foods in improving health and life quality Discusses the implications of unconventional and therapeutic foods on safety Presents the industrial and economic impact of unconventional and therapeutic foods This practical study comprises eighteen practical and field-tested software packages on landslide in soil and rock and a further six on tunnels, complete with source programs, user manuals and worked examples. Using these software packages, this book illustrates how geomaterials in hazardous areas can be analyzed for potential failure and how predictions based on realistic input data can be generated. Soil-structure interaction is an area of major importance in geotechnical engineering and geomechanics

Advanced Geotechnical Engineering: Soil-Structure Interaction using Computer and Material Models covers computer and analytical methods for a number of geotechnical problems. It introduces the main factors important to the application of computer

Coastal reservoirs are viewed in many regions of the world as an emerging concept of storing fresh water when the river basin is in flood. Similar reservoirs (or impoundments) can be used to generate tidal renewable energy and/or provide the catalysis for urban regeneration. Constructed near the coast in natural river basins, these reservoirs have a smaller environmental footprint and are less obstructive than inland dams. Written by an international group of Civil, Environmental, and Geotechnical Engineers, Sustainable Water Resource Development using Coastal Reservoirs discusses the latest research and breakthroughs in their use, while offering expert advice into their sustainable design and construction. The perfect reference for researchers exploring the feasibility of this emerging technology or experienced professionals who wish to implement this technology as a water scarcity solution or a tidal renewable energy source or for urban regeneration, Sustainable Water Resource Development using Coastal Reservoirs provides an expert resource to the design, construction and use of coastal reservoirs. The reference begins with a brief but readable examination of water quantity, quality design and geotechnical considerations. The book includes international case studies to clearly illustrate the various uses, design, planning, construction, and operation methods. These case studies include projects such as: Afsluitdijk in the IJsselmeer, (Netherlands), Zuiderzee (Netherlands), Thanneermukkom Bund (India), Sihwa (South Korea), Saemangeum, (South Korea), Chenhang (China), Plover Cove (China), and Marina Barrage (Singapore). Explores the feasibility/design implications for Coastal Reservoirs based on estimation of runoff, detailed assessment of water demand and estimation of water quality Provides design schemes/procedures for the construction and operation of coastal reservoirs Includes case studies to illustrate the design, planning, construction and operations of coastal reservoirs from around the world This handy

collection of 140 bite-sized ideas on practical aspects of quality management offers interesting perspectives to build and enhance quality of products and services through effective people management, process improvement, and organization culture-building. A must have reference for any engineer involved with foundations, piers, and retaining walls, this remarkably comprehensive volume illustrates soil characteristic concepts with examples that detail a wealth of practical considerations, It covers the latest developments in the design of drilled pier foundations and mechanically stabilized earth retaining wall and explores a pioneering approach for predicting the nonlinear behavior of laterally loaded long vertical and batter piles. As complete and authoritative as any volume on the subject, it discusses soil formation, index properties, and classification; soil permeability, seepage, and the effect of water on stress conditions; stresses due to surface loads; soil compressibility and consolidation; and shear strength characteristics of soils. While this book is a valuable teaching text for advanced students, it is one that the practicing engineer will continually be taking off the shelf long after school lets out. Just the quick reference it affords to a huge range of tests and the appendices filled with essential data, makes it an essential addition to an civil engineering library. This edited volume is an up-to-date guide for students, policy makers and engineers on earthquake engineering, including methods and technologies for seismic hazard detection and mitigation. The book was written in honour of the late Professor Jai Krishna, who was a pioneer in teaching and research in the field of earthquake engineering in India during his decades-long work at the University of Roorkee (now the Indian Institute of Technology Roorkee). The book comprehensively covers the historical development of earthquake engineering in India, and uses this background knowledge to address the need for current advances in earthquake engineering, especially in developing countries. After discussing the history and growth of earthquake engineering in India from the past 50 years, the book addresses the present status of earthquake engineering in regards to the seismic resistant designs of bridges, buildings, railways, and other infrastructures. Specific topics include response spectrum superposition methods, design philosophy, system identification approaches, retaining walls, and shallow foundations. Readers will learn about developments in earthquake engineering over the past 50 years, and how new methods and technologies can be applied towards seismic risk and hazard identification and mitigation. This book introduces the latest research findings in cloud, edge, fog, and mist computing and their applications in various fields using geospatial data. It solves a number of problems of cloud computing and big data, such as scheduling, security issues using different techniques, which researchers from industry and academia have been attempting to solve in virtual environments. Some of these problems are of an intractable nature and so efficient technologies like fog, edge and mist computing play an important role in addressing these issues. By exploring emerging advances in cloud computing and big data analytics and their engineering applications, the book enables researchers to understand the mechanisms needed to implement cloud, edge, fog, and mist computing in their own endeavours, and motivates them to examine their own research findings and developments. Expansive Soils provides the reader with easy and specific access to problems associated with expansive soils, characteristics and treatment, and evaluation and remediation. Set up with contributions from worldwide expert, this main reference guide is intended for engineers, researchers and senior students working on soil This book deals with the paradoxical role of autophagy in tumor suppression and tumor promotion in cancer cells. Autophagy plays opposing, context-dependent roles in tumors; accordingly, strategies based on inhibiting or stimulating autophagy could offer as potential cancer therapies. The book elucidates the physiological role of autophagy in modulating cancer metastasis, which is the primary cause of cancer-associated mortality. Further, it reviews its role in the differentiation, development, and activation of multiple immune cells, and its potential applications in tumor immunotherapy. In addition, it examines the effect of epigenetic modifications of autophagy-associated genes in regulating tumor growth and therapeutic response and summarizes autophagy's role in the development of resistance to a variety of anti-cancer drugs in cancer cells. In closing, it assesses autophagy as a potential therapeutic target for cancer treatment. Given its scope, the book offers a valuable asset for all oncologists and

researchers who wish to understand the potential role of autophagy in tumor biology. Currently, the major challenge of humanity is focused on population growth through agricultural production in order to meet the demand for food. The food crunch is mainly due to pest and disease. Traditional methods, synthetic insecticides and microbicides cause health hazards to human beings, domestic animals and also affect our immediate environments. Serious concerns were implemented by both developing and developed countries as Integrated Pest Management (IPM) and Bio-intensive Integrated Pest Management (BIPM) systems where biopesticides play an important role worldwide. The available books are limited to particular aspects of biopesticides. Hence, it is imperative to bring out a holistic documentation which will provide the reader information on all aspects of biopesticides. The book consists of five sections namely microbials, botanicals, natural enemies semio-chemicals and biotechnology and equipments, bioinformatics tools and IPM. In Section I, microbial deals with utilization of Bacillus in control of phytonematodes; biological control of pest and diseases with fluorescent pseudomonads, entomopathogenic fungus and entomopathogenic nematodes in pest management, microbial viral insecticides and microbial elicitors to induce immunity for plant disease control in chilli and tomato. Importance of plant essential oils, botanicals in endocrine disruption, relevance of botanicals and use of plant volatile on pest management has been discussed in Section II. Importance and role of reduviidae, weaver ants, ground beetles, Odonatas, spiders in biological control has been discussed in Section III. In addition, genetic improvement of biocontrol agents for sustainable pest management has also been highlighted. In Section IV, classical practices and pheromone, kairomonal enhancement to natural enemies and use of transgenic plants in insect control are highlighted. Equipment and their application methodologies for application of biopesticides; relevance of bioinformatics in biopesticides management; pest management of soybean, bio fouling and eco friendly antifoulants have been highlighted in Section V. Each chapter has objectives and conclusion along with recommendations. This collection of articles by Srila Prabhupada from Back to Godhead magazine covers knowledge of the soul and the practice of bhakti-yoga. These interviews, lectures, and essays cover topics such as the goal of human life, seeking a true spiritual teacher, reincarnation, super-consciousness, Krishna and Christ, and spiritual solutions to today's social and economic problems. This book is for anyone motivated and driven by the desire to create improvements within their team or wider business. This book presents an in-depth, science-based approach to applying key project-management and spatial tools and practices in environmental projects. Providing important data for those considering projects that balance social-economic growth against minimizing its ill-effects on planet Earth, the book discusses various aspects of environmental engineering, as well as formula and analytical approaches required for more informed decision-making. Beginning with a broad overview of the factors and features of environmental processes and management, the book then clearly details the general application of fundamental processes, the characteristics of the different systems in which they occur, and the way in which these factors influence process dynamics, environmental systems, and their possible remedies. While primarily intended for professionals responsible for the management of environmental projects or interested in improving the overall efficiency of such projects, it is also useful for managers in the private, public, and not-for-profit sectors. Further, it is a valuable resource for students at both undergraduate and postgraduate levels, and an indispensable guide for anyone wanting to develop their skills in modern environmental management and related techniques. Contributed articles presented at a seminar organized by the Dept. of Political Science, University of Gauhati in Nov. 2006. Provides a basic text covering useful topics, procedures, standards and specifications for materials and their testing, as per conditions and practices prevalent in the country. This book includes trade names, compositions, properties and applications of engineering materials commonly used in industry in the form of tables. The book refutes the dominant understanding about caste panchayats as mere dispute resolution bodies that are vestiges of the past. In tracing the long career and evolution of intra-caste governance from 300 BC to the present, it challenges several orthodoxies in the caste scholarship. Most prominently, it questions the assumptions of modernization theory that became internalized in the very definition of

caste-based political organisations as caste became a subject of study in politics in the 1960s and 70s. In doing this, the book reflects in some detail on the uncomfortable question of the persistence of caste-based conservatism despite the current dominance, so to say, of caste-based democratization in the Indian polity. It tries to make visible the limitations of 'caste politics from below', as it is being imagined today, making a plea for a radical re-imagination of caste as an identity that does not require a self-perpetuation of the primordial aspects of caste to pursue the opportunities offered by modern democracy, but one that can facilitate the empowerment of caste through the pursuit of the ameliorations on offer as well as the annihilation of caste, as eventually mutual goals. How do people respond to a state that is violent towards its own citizens? In *State, Violence, and Legitimacy in India*, this question is addressed through insights offered by ethnographic explorations of everyday policing in Delhi and the anti-insurgency measures of the Indian army in Lakhpathar village in Assam. Battling the dominant understanding of the inverse connect between state legitimacy and use of violence, Santana Khanikar argues that use of violence does not necessarily detract from the legitimacy of the modern territorial nation-state. Based on extensive research of two sites, the book develops a narrative of how two facets of state violence, one commonly understood to be for routine maintenance of law and order and the other to be of extraordinary need for maintaining unity and integrity of the nation-state, often produce comparable responses. The book delves into the debates surrounding state-citizen relationship in India, while critically engaging with dominant notions of state legitimacy and its relation with use of violence by the state. In January 2011, Felani Khatun was shot dead while attempting to cross the border from India to Bangladesh. Her body remained hung on the fence as a warning to those who illegally crossed an international border. Migration to India from the current geographical and political entity called Bangladesh is more than a century old and had begun long before the nation states were created in South Asia. Often termed as 'foreigners' and 'infiltrators', Bangladeshi migrants such as Felani find their way into India for the promise of a better future. Post 1971, there has been a steady movement of people from Bangladesh into India, both as refugees and for economic need, making this migration a complex area of inquiry. This book focuses on the contemporary issue of undocumented Bangladeshi migration to the three Indian states of Assam, West Bengal, and Delhi, and how the migrants are perceived in light of the ongoing discourses on the various nationalisms in India. Each state has a unique history and has taken different measures to respond to Bangladeshi migrants present in the state. Based on extensive fieldwork and insightful interviews with influential members from key political parties, civil society organizations, and Hindu and ethnic nationalist bodies in these states, the book explores the place and role of Bangladeshi migrants in relation to the inherent tension of Indian nationalism.

The book "The Socio-Economic Development and Environmental Sustainability: The Indian Perspective" presents a multi-dimensional facet of Socio-Economic Development and Environmental Sustainability

in India. The book consists of three parts under which a total number of 25 research articles are there. The unscientific exploitation of natural resource and rapid urbanization results into the unwanted overshoot which ultimately making our earth vulnerable to natural disasters and calamities. The book has also explored the demographic trends and urbanization in Indian Context. It has also emphasized on the various dimensions of socio-economic development and its regional disparity in a planned way. The present volume is associated with such problems and accounted for the suitable measures to unlock a new direction towards balanced Economic growth and Environmental Sustainability. This book examines the afterlife of Partition as imprinted on the memories and postmemories of Hindu and Sikh survivors from West Punjab to foreground the intersection between history, memory and narrative. It shows how survivors script their life stories to reinscribe tragic tales of violence and abjection into triumphalist sagas of fortitude, resilience, industry, enterprise and success. At the same time, it reveals the silences, stutters and stammers that interrupt survivors' narrations to bring attention to the untold stories repressed in their consensual narratives. By drawing upon current research in history, memory, narrative, violence, trauma, affect, home, nation, borders, refugees and citizenship, the book analyzes the traumatizing effects of both the tangible and intangible violence of Partition by tracing the survivors' journey from refugees to citizens as they struggle to make new homes and lives in an unhomey land. Moreover, arguing that the event of Partition radically transformed the notions of home, belonging, self and community, it shows that individuals affected by Partition produce a new ethics and aesthetic of displacement and embody new ways of being in the world. An important contribution to the field of Partition studies, this book will be of interest to researchers on South Asian history, memory, partition and postcolonial studies.
