"The propagation of upland game birds is an industry of considerable magnitude in the United States, and there are within our borders some of the largest and most productive game farms in the world. Despite the large output already attained, the demand from state game departments and sportsmen's organizations for game birds and their eggs for restocking, from other propagators for additional breeding stock, and from fanciers and zoological gardens for exhibition specimens is so large that it is seldom necessary to

dispose of birds for food purposes. Even when sale for food is necessitated (usually in the case of surplus males only), prices are good, as the demand is from the better class of restaurants, hotels, and clubs. Returns for birds used for the enhancement of sport are higher and as a rule entirely satisfactory to the producer."--Page ii. Includes Part 1, Number 1 & 2: Books and Pamphlets, Including Serials and Contributions to Periodicals (January - December) "The MOSS User's Manual has been designed as a reference document for trained users of the Map Overlay and Statistical System (MOSS) interactive graphics software. MOSS is the data analysis component of a Geographic Information System (GIS) originally developed by the Western Energy and Land Use Team (WELUT). Currently, MOSS is being developed under the direction of the U.S. Bureau of Land Management with cooperation from the U.S. Fish and Wildlife Service, the U.S. Bureau of Indian Affairs, the U.S. Geological Survey, the U.S. Forest Service, the Soil Conservation Service, the Minerals Management Service and the U.S. Army Corps of Engineers. This document contains information necessary for a user to access and use the MOSS software. MOSS can address digital map data in two

formats, vector and raster, or cell. For convenience, raster processing capabilities are specifically called MAPS (Map Analysis and Processing System), due to differences in the software. It is assumed that the reader of this document is familiar with the GIS and its applications"--Leaf iii Imagine a keyboard that could combine onboard sounds with live audio. "Accessibility and Acceptability in Technical Manuals" is written for an audience with a general interest in readability studies, linguistics and technical writing. With the main emphasis on technical manuals the book is primarily targeted at those who have a special interest in the design and use of utility texts and how these texts are received and understood by a multifaceted audience. Accessibility is not a new research area and many explanations have been offered over the past years as to why non-experts often have difficulties in comprehending texts written by technological experts. This book offers a new approach to accessibility studies by exploring not only style, but also attitudes to style, by asking text consumers which style they prefer for different parts of the manual. A key role is played by the Systemic Functional Linguistics' notion of grammatical metaphor, a stylistic choice that is commonly used in technical literature. Grammatical metaphor although apparently obstructing the comprehension process of some readers is a common element in the preferred style that separates the insiders from the outsiders . An explanation of this rather surprising result is offered by resorting to Critical Discourse Analysis.
