Human Rights and World Trade Jan 30 2023 A new and incisive analysis of the political viability of human rights, with an in-depth investigation of its largest violation: world hunger. Gonzalez-Pelaez develops John Vincent's theory of basic human rights within the context of the international political economy and demonstrates how the right to food has become an international norm enshrined within international law. She then assesses the international normative and practical dimensions of hunger in connection with international trade and poverty. Using the society of states as the framework of analysis, she explores the potential that the current system has to correct its own anomalies, and examines the measures that can move the hunger agenda forward in order to break through its current stagnation.

Narratives of Migration and Displacement in Dominican Literature Jan 18 2022 Establishing an interdisciplinary connection between Migration Studies, Post-Colonial Studies and Affect Theory, Méndez analyzes the symbolic interplay between emotions, cognitions, and displacement in the narratives written by and about Dominican and Dominican-Americans in the United States and Puerto Rico. He argues that given the historic place of creolization as a marker of national, cultural, and social development in the Caribbean and particularly the Dominican Republic, this cultural process is not magically annulled in Caribbean immigrations to the U.S. Instead, this book illustrates the numerous ways in which Dominicans' subjective interpretation of their experiences of migration and incorporation into U.S. society, seen through the filter of multiple creolizations of the past, are woven into their written works as a series of variations on Americanness and Dominicanness. Through close readings of selected writings by Pedro Henríquez Ureña, José Luis González, Junot Díaz, Josefina Báez, Loida Maritza Pérez among others, Méndez argues that emotional creolizations operate as a psychological parameter on immigrant populations as they negotiate their transcultural status against the ideological norms of assimilation in their new host country. Consequently, he proposes that this emotional creolization is dialectical - that is, it not only affects diasporic populations, but also changes the norms and terms of assimilation as well.

Make Life Visible Jun 10 2021 This open access book describes marked advances in imaging technology that have enabled the visualization of phenomena in ways formerly believed to be completely impossible. These technologies have made major contributions to the elucidation of the pathology of diseases as well as to their diagnosis and therapy. The volume presents various studies from molecular imaging to clinical imaging. It also focuses on innovative, creative, advanced research that gives full play to imaging technology in the broad sense, while exploring cross-disciplinary areas in which individual research fields interact and pursuing the development of new techniques where they fuse together. The book is separated into

three parts, the first of which addresses the topic of visualizing and controlling molecules for life. The second part is devoted to imaging of disease mechanisms, while the final part comprises studies on the application of imaging technologies to diagnosis and therapy. The book contains the proceedings of the 12th Uehara International Symposium 2017, "Make Life Visible" sponsored by the Uehara Memorial Foundation and held from June 12 to 14, 2017. It is written by leading scientists in the field and is an open access publication under a CC BY 4.0 license.

Fundamentals of Tractor Design Feb 28 2023 This textbook offers a comprehensive review of tractor design fundamentals. Discussing more than hundred problems and including about six hundred international references, it offers a unique resource to advanced undergraduate and graduate students, researchers and also practical engineers, managers, test engineers, consultants and even old-timer fans. Tractors are the most important pieces of agricultural mechanization, hence a key factor of feeding the world. In order to address the educational needs of both less and more developed countries, the author included fundamentals of simple but proved designs for tractors with moderate technical levels, along with extensive information concerning modern, premium tractors. The broad technical content has been structured according to five technology levels, addressing all components. Relevant ISO standards are considered in all chapters. The book covers historical highlights, tractor project management (including cost management), traction mechanics, tires (including inflation control), belt ground drives, and ride dynamics. Further topics are: chassis design, diesel engines (with emission limits and installation instructions), all important types of transmissions, topics in machine element design, and human factors (health, safety, comfort). Moreover, the content covers tractor-implement management systems, in particular ISOBUS automation and hydraulic systems. Cumulative damage fundamentals and tractor load spectra are described and implemented for dimensioning and design verification. Fundamentals of energy efficiency are discussed for single tractor components and solutions to reduce the tractor CO₂ footprint are suggested.

Theory of Land Locomotion Dec 17 2021 *Theory of Land Locomotion* is a comprehensive source of the information now available on the relations between a motor vehicle and the physical environment in which it operates. It lays the foundation for a new type of applied mechanics by systematizing the accumulated experience of men who have worked closely with automotive problems over the past forty years--engineers, designers, technicians, and production men. The result is an integrated theory of land locomotion that will advance land transportation much as aerodynamics and hydrodynamics have helped the development of air and sea travel. Placing particular emphasis on off-the-road vehicles, the book discusses in detail problems of soil and snow mechanics; size-form relationships as an index of economy; terrain conditions; the process of moving tracks, skis, sleds, toboggans, rigid wheels, and pneumatic tires; static and dynamic behavior; and dimensional analysis, testing, and overall economy.

Fitrah- Mans Natural Disposition Jan 06 2021 "Fitrah: Man's Natural Disposition" is a translation of the Persian book "Fi?rat" by the great Muslim thinker and reformer, Ayatollah Murtada Mutahhari. "Fitrah" is the theme of a 10-session lecture series given the martyred thinker in 1976-77. With ample citations from the Qur'an and other traditional Islamic sources, Mutahhari discusses the concept of 'fitrah' or man's natural disposition. The author does not confine himself to Islamic references as he continuously engages with the views of a wide range of philosophers including Plato, William James, Russell, Nietzsche, Marx, Feuerbach, Auguste Comte, Spencer, Will Durant, and Durkheim, among others. Mutahhari's ontological discussion covers a range of issues, including the literal and technical meaning of 'fitrah', sacred inclinations, love and worship, and the evolution of human originality. He also examines materialism and provides a theistic approach to some issues pertaining to the theories on the origin of religion, the evolution of human society, intrinsic and acquired guidance, and intuitive and sensory dispositions. This book lays a significant interconnected and deep foundation in Islamic theology and an understanding of human psychology, sociology and anthropology fully supported by the holy Quran, ahadith, logic and philosophy. The reader will leave with a holistic understanding of Islam and a true connection with the Almighty (SWT) through one own self.

Walk the Winning Ways of Golf's Greatest Jul 24 2022 Why is "Walk the Winning Ways of Golfing's Greatest" different from other golf books? It's a treasury of what motivated and inspired the best players in golf and how you will learn from them. We contacted the very best in golf like, Greg Norman, and others asking what advice they had for young players. Greg Norman responded, "My goal was always to be the best I could be. If you think about it...being the best you can be is infinite. There's always room to grow. There's always something new to learn. And there's always something new to do." Jordan Spieth said, "There's nobody that had more influence on my golf game than Tiger. When I was 11 years old, I watched Tiger hole out that amazing birdie chip in on the 16th hole at Augusta in 2005. That chip made me want to literally walk outside and for hours on end practice chipping." You don't need to spend a lot of time searching for how the best in golf got to where they are. It's all here in this book. You will be inspired. You will learn things other young golfers will never know. Ray Floyd replied, "My advice to any young golfer who wants to excel at the sport is to dedicate yourself to being good in all aspects of the game.... The real scoring part takes place from 60 yards in, so I would encourage youngsters to spend as much time learning how to chip and putt as they do with their driving." Peter Jacobsen said, "'My father taught me the game and he always stressed the fun of playing and being with my friends and family on the course.... Golf taught me self-reliance, taking responsibility and honesty." Tiger Woods said, Tiger said, "People don't understand that when I grew up, I was never the most talented. I was never the biggest. I was never the fastest. I certainly was never the strongest. The only thing I had was my work ethic.... That's why I've busted my butt on the range for hours on end and made changes to get to this point where I'm able to compete at the highest level in major championships. That's where you want to be." You will learn how the pros maintained a good confidence level. Jack Nicklaus said, "Confidence is the most important single factor in this game, and no matter how great your natural talent, there is only one way to obtain and sustain it: hard work." 170 pages of motivational stories and quotes from golf's greatest you can pick up anytime your confidence level is low. Review: "Five Stars. An Enlightening Read." *Walk the Winning Ways of Golf's Greatest* is a wonderful collection of interviews and quotes from the world's top golfers. The advice these top golfers give applies not only to golf but to life itself. Even if you don't play golf, you will learn a great deal from these amazing sports people. It's all about setting goals in whatever you do in life and having confidence, doing the hard yards, believing in yourself, and never giving up. Best quotes: 'Telling me I can't do something is the worst you can say to me, because I'll definitely do it. I'm very determined.' - Dustin Johnston. I'll keep on diving back into this book to reread some of these amazing quotes and advice from the world's best golfers. Enlightening! A highly recommended read!" Another review: "It's for young golfers who want to make the high school golf team or get that college scholarship." Practical Methods for Analysis and Design of HV Installation Grounding Systems Aug 01 2020 *Practical Methods for Analysis and Design of HV Installation Grounding Systems* gives readers a basic understanding of the modeling characteristics of the major components of a complex grounding system. One by one, the author develops and analyzes each component as a standalone element, but then puts them together, considering their mutual disposition, or so-called proximity effect. This is the first book to enable the making and analysis of the most complex grounding systems that are typical for HV substations located in urban areas that uses relatively

simple mathematical operations instead of modern computers. Since the presented methods enable problem-solving for more complex issues than the ones solved using National, IEC and/or IEEE standards, this book can be considered as an appendix to these standards. Develops general equations of lumped parameter ladder circuits Includes the analytical expression for determination of ground fault current distribution for a fault anywhere along a cable line Presents measurement and analytical methods for the determination of actual ground fault current distribution for high-voltage substations located in urban areas Provides the analytical procedure for the determination of the critical ground fault position for faults appearing in outgoing transmission lines Defines testing procedure for the correct evaluation of grounding systems of substations located in urban areas

Implementing the Circular Economy for Sustainable Development Feb 25 2020

Implementing the Circular Economy for Sustainable Development presents the concept of the circular economy with the goal of understanding its present status and how to better implement it, particularly through environmental policies. It first tackles the definition of a circular economy in the context of sustainability and the differences in defining the concept across disciplines, including its fallibilities and practical examples. It then goes on to discuss the implementation of a circular economy, including the increasing variety of technological, mechanical, and chemical procedures to contend with and the need for stakeholder support in addition to improved business models. The second half of the book, therefore, presents tools, approaches, and practical examples of how to shape environmental policy to successfully implement a circular economy. It analyzes deficiencies of current regulations and lays the groundwork for the design of integrated environmental policies for a circular economy. Authored by an expert in environmental economics with decades of experience, *Implementing the Circular Economy for Sustainable Development* is a timely, practical guide for sustainability researchers and policymakers alike to move more efficiently toward a circular economy and sustainable development. Presents a clear view of the critical components, features, and issues of a circular economy Discusses a variety of practical examples from current policies in the context of a circular economy to better understand the

challenges associated with its implementation Analyzes strengths and weaknesses of current environmental policies and their interactions with innovations in engineering and science
